

MUNACHI UKEME

Full-Stack Developer (MERN) — Node.js · React · MongoDB · Payment Integrations

Lagos, Nigeria | github.com/Munachi-ukeme | moonstore.ng | WhatsApp: +234 913 222 7203

SUMMARY

Backend-leaning full-stack developer (MERN stack) with hands-on experience designing and shipping production web applications. Built and currently maintain MoonStore, a live multi-tenant SaaS platform with real payment processing. Comfortable owning projects end-to-end — architecture, API design, database modeling, and deployment.

PROJECT EXPERIENCE

MoonStore — Full-Stack Developer

Live multi-tenant SaaS storefront platform for African vendors | moonstore.ng

- Designed and built the full-stack architecture for a multi-tenant SaaS platform
- Implemented Paystack payment integration, including subaccount handling and webhook-driven transaction processing
- Built a usage-based pricing engine with dynamic fee calculation
- Developed real-time messaging between vendors and customers using Socket.IO
- Built an admin dashboard for user management, revenue tracking, and reporting
- Debugged and resolved production issues on a live application with real users
- Integrated third-party services including Cloudinary for media handling and MongoDB Atlas for data storage

MoonBlog — Full-Stack Developer

Full-stack blog platform with custom-built CMS

- Designed and built the full-stack architecture for a blog platform using the MERN stack
- Built a custom CMS from scratch, including authentication and role-based access control
- Implemented admin functionality for creating, editing, deleting, and publishing posts
- Built category-based browsing so users can filter and read published posts
- Designed the MongoDB schema for posts, categories, and publishing status

Personal Portfolio Website — Developer

- Built and deployed a personal portfolio site using HTML, CSS, and vanilla JavaScript
- Designed an interactive academic planner to showcase practical JavaScript problem-solving
- Built a contact form with client-side validation
